

# Material Conveying Systems

## Vibratory Hopper Feeder

### Features :

1. It is a smooth and linear vibrator which delivers uniform output.
2. Low noise level due to use of highly advanced Electro-magnetic vibration technology.
3. Fine vibration control to achieve desired feed rate.
4. It can be synchronized with any conveyor or machine.

It is used to feed the material to conveyor or any packaging or processing machine. It is generally used for feeding material like grains, pulses, wafers, Namkeens, Fryums.
